Allowable Subject Matter

1. Claims 1-24 are allowed.

The following is an examiner's statement for reasons for allowance.

2. Claim 1 is allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or fairly suggest suppressing silence in bi-directional communication between a centralized node and a plurality of local nodes in an asynchronous network environment comprising the steps of detecting a silent period in an upstream channel and deactivating unsolicited grant service and not activating request polling in response to said detecting a silent period. It is noted that the closest prior art of record, Chapman shows detecting a silent period in an upstream channel and deactivating unsolicited grant. However, Chapman fails to suggest not activating request polling in response to said detecting a silent period.

Claim 15 is allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or fairly suggest compressing silence in bi-directional communication between a centralized node and a plurality of local nodes in an asynchronous network environment comprising the steps of providing a first level of unsolicited grant service having a first bandwidth requirement, detecting a silent period in an upstream channel and providing a second level of unsolicited grant service in response to said detecting a silent period, wherein said second level of unsolicited grant service has a second bandwidth requirement that is less than said first bandwidth requirement.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- US Patent (6621812) to Chapman
- US Patent (6807193) to Beser
